Materials

1000D Cordura®, Nylon Webbing, Nylon Hardware, Hypalon™

Description

With adjustable pockets designed to fit all makes and models of radios and True North's internal suspension system, the Gen. 2 Radio Harnesses are even more comfortable, durable and functional than ever.

The Dozer holds the New Generation fire shelter, radio, and spare battery where it's easily accessed yet still out of the way. The pack sits comfortably on your chest without sagging or swinging due to True North's unique internal suspension system.

With the smallest foot-print of any harness, the **Stealth** is guaranteed to trap the least heat and keep you the most comfortable. This radio harness also converts from a chest harness to a belt harness, or can attach to your pack's shoulder harness.

The Dual Universal Radio Harness pairs comfort and function with a side-zip on internal pocket for faster access. True North's unique internal suspension system keeps the radio harness comfortably on your chest without sagging or swinging. It holds most sizes of radios from Bendix King down to Icom and Kenwood.

The Single Universal Radio Harness features hook and loop closure front pocket for spare battery clamshell or other small items. The half-moon zippered opening allows easy access to the main pocket which features an internal organiser pocket. Elastic straps keeps radios in place when bending over.

Features and Benefits

The Dozer

- Adjustable radio pocket fits a wide range of models from larger legacy radios to smaller, modern handsets
- Front pocket fits large fire shelter
- Multiple storage throughout for batteries, maps, notebooks and pens
